

Engineer/Embedded Developer

We are a small Brown Deer-based tech firm specializing in design, development and light manufacturing of electronic equipment.

We are seeking well-organized, energetic and motivated individuals with excellent communication skills to join our growing team.

Responsibilities vary by project and may include data collection & video acquisition, analytics for new and existing CCTV security applications, designing and building PCBs around a custom set of requirements and more. The ideal candidates should have experience in the following:

electronics design – create new and modify existing PCBs

excellent soldering skills

Arduino, Raspberry Pi, Adafruit, Intel, Google, FPGA, SoC, etc.

Embedded C/C++, Linux

Working knowledge of schematic & pcb layout software, CAD software (AutoCad, SolidWorks, etc) and creating 3D models

Experience with 3D printing and CNC

Don't feel that you meet all the above? No problem. Send an email anyway to badger.tech.intl@gmail.com and tell us how you can best contribute based on your experience (and/or schooling). Be sure to attach your resume & salary requirements. Chances are, we may still use your talents elsewhere.

VETERANS – we want to hear from you!

Proof of US citizenship or legal employment status is required.
